Passwords revealed by sweet deal

More than 70% of people would reveal their computer password in exchange for a bar of chocolate, a survey has found.

It also showed that 34% of respondents volunteered their password when asked without even needing to be bribed.

A second survey found that 79% of people unwittingly gave away information that could be used to steal their identity when questioned.

Security firms predict that the lax security practices will fuel a British boom in online identity theft.
What a piece of work is a man! how Noble in Reason! how infinite in faculty! in form and moving how express and admirable! in Action, how like an Angel! in apprehension, how like a God!

-- *Hamlet* Act II, Scene II

“Humans are incapable of securely storing high-quality cryptographic keys, and they have unacceptable speed and accuracy when performing cryptographic operations.

“Psychological acceptability.”

Wells Fargo Web-enables 6,200 ATMs

The Windows-based infrastructure enables remote upgrades

By Lucas Mearian

March 3, 2005 12:00 PM ET  Add a comment

Computerworld - Wells Fargo & Co. announced this week that it has completed a five-year project to Web-enable its 6,200 ATMs in 23 states. The Windows-based infrastructure is designed to allow Wells Fargo to update and add services such as new languages and envelope-free deposits to its entire network remotely.

Wells Fargo took all "the rational steps you’d take to harden any operating system," such as closing unused ports. But, "the reality is you can’t buy a new ATM that runs OS/2. This is where the industry is," he said.
