

# CS-184: Computer Graphics

## Lecture #6: Raytracing

Prof. James O'Brien  
University of California, Berkeley

V2009-F-06-1.0

### Today

- Raytracing
  - Shadows and direct lighting
  - Reflection and refraction
  - Antialiasing, motion blur, soft shadows, and depth of field
- Intersection Tests
  - Ray-primitive

# Global Illumination Effects

**PCKTWCH**  
Kevin Odhner  
POV-Ray

9

# Early Raytracing

Turner Whitted

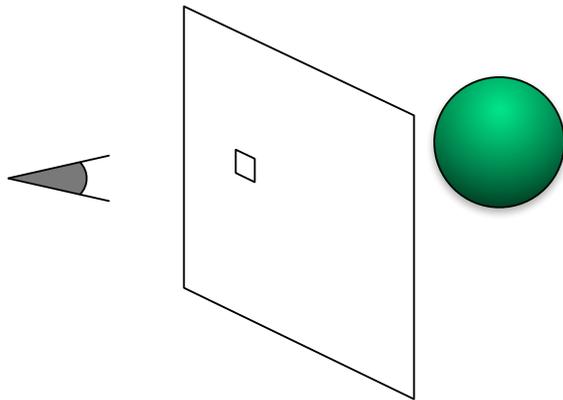

10

# Raytracing

- Scan conversion
  - $3D \rightarrow 2D \rightarrow \text{Image}$
  - Based on transforming geometry
- Raytracing
  - $3D \rightarrow \text{Image}$
  - Geometric reasoning about light rays

11

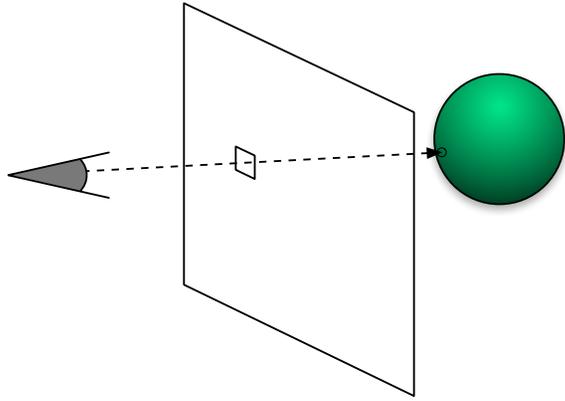

# Raytracing

Eye, view plane section, and scene

12

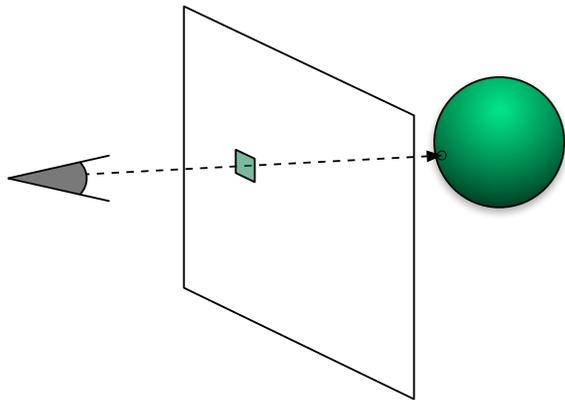

# Raytracing

Launch ray from eye through pixel, see what it hits

13

# Raytracing

Compute color and fill-in the pixel

14

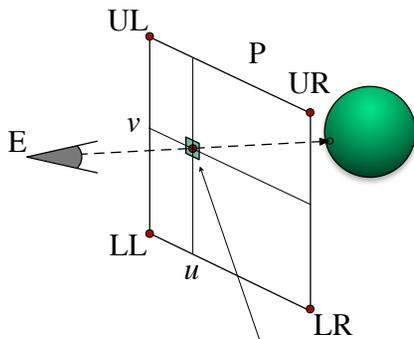

# Raytracing

- Basic tasks
  - Build a ray
  - Figure out what a ray hits
  - Compute shading

15

# Building Eye Rays

- Rectilinear image plane build from four points

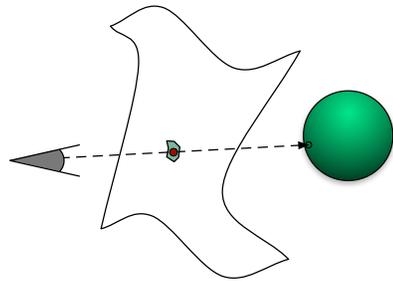

$$\mathbf{P} = u (v\mathbf{LL} + (1 - v)\mathbf{UL}) + (1 - u)(v\mathbf{LR} + (1 - v)\mathbf{UR})$$

16

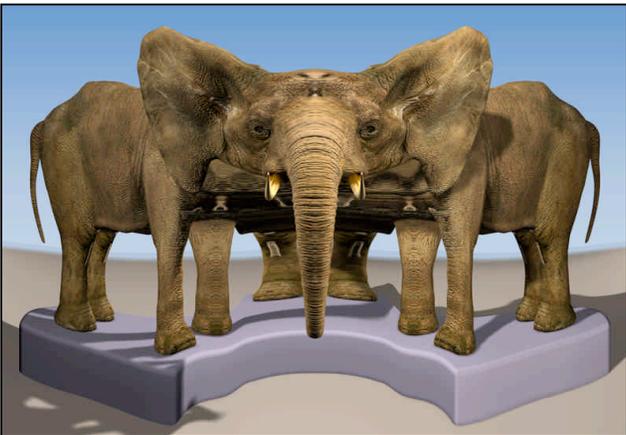

# Building Eye Rays

- Nonlinear projections
  - Non-planar projection surface
  - Variable eye location

17

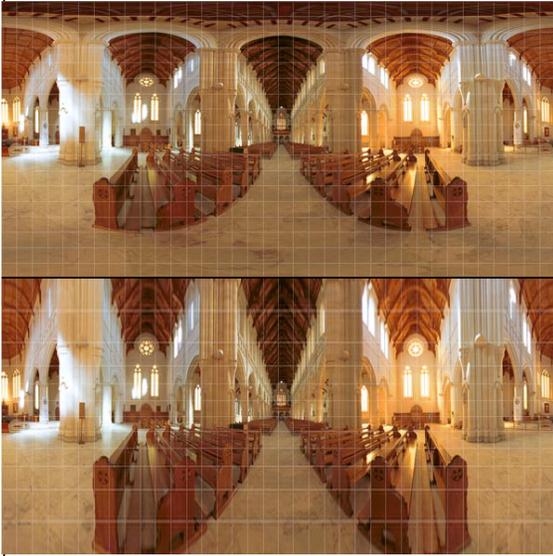

# Examples

**Multiple-Center-of-Projection Images**  
P. Rademacher and G. Bishop  
SIGGRAPH 1998

18

# Examples

**Spherical and Cylindrical Projections**  
Ben Kreunen  
From *Big Ben's Panorama Tutorials*

19

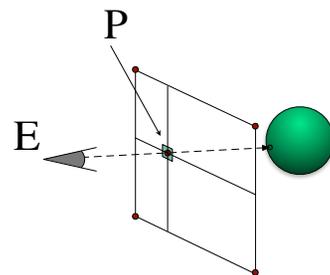

# Building Eye Rays

- Ray equation

$$\mathbf{R}(t) = \mathbf{E} + t(\mathbf{P} - \mathbf{E})$$

$$t \in [1 \dots + \infty]$$

- Through eye at  $t = 0$
- At pixel center at  $t = 1$

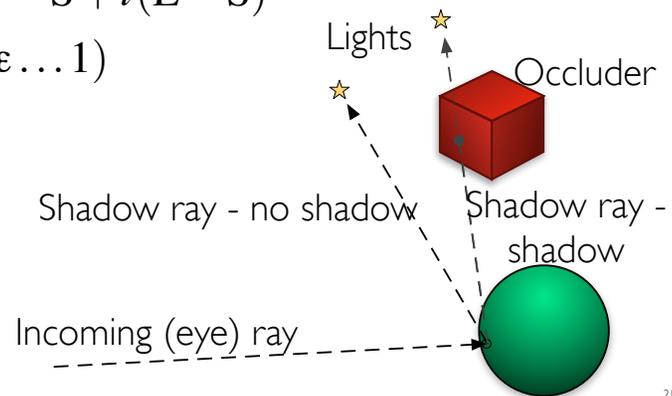

20

# Shadow Rays

- Detect shadow by rays to light source

$$\mathbf{R}(t) = \mathbf{S} + t(\mathbf{L} - \mathbf{S})$$

$$t \in [\epsilon \dots 1)$$

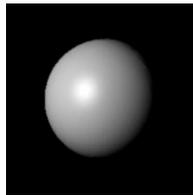

21

# Shadow Rays

- Test for occluder
  - No occluder, shade normally ( e.g. Phong model )
  - Yes occluder, skip light ( don't skip ambient )
- Self shadowing
  - Add shadow bias
  - Test object ID

Self-shadowing

Correct

22

# Reflection Rays

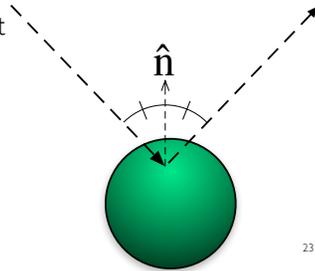

- Recursive shading

- Ray bounces off object
- Treat bounce rays (mostly) like eye rays
- Shade bounce ray and return color

$$\mathbf{R}(t) = \mathbf{S} + t\mathbf{B}$$

$$t \in [\epsilon \dots +\infty)$$

- Shadow rays
  - Recursive reflections
- Add color to shading at original point
  - Specular or separate reflection coefficient

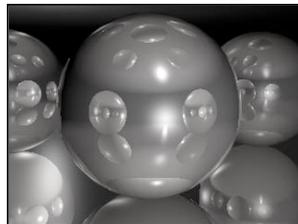

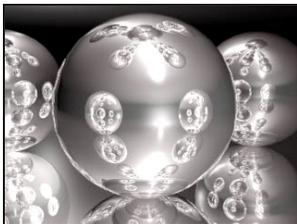

23

# Reflection Rays

- Recursion Depth

- Truncate at fixed number of bounces
- Multiplier less than J.N.D.

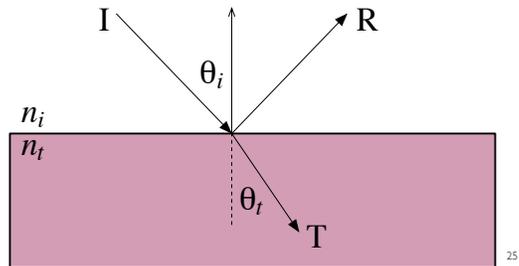

24

# Refracted Rays

- Transparent materials bend light

- Snell's Law  $\frac{n_i}{n_t} = \frac{\sin \theta_t}{\sin \theta_i}$  ( see clever formula in text... )

$\sin \theta_t > 1$       Total (internal) reflection

# Refracted Rays

- Coefficient on transmitted ray depends on  $\theta$

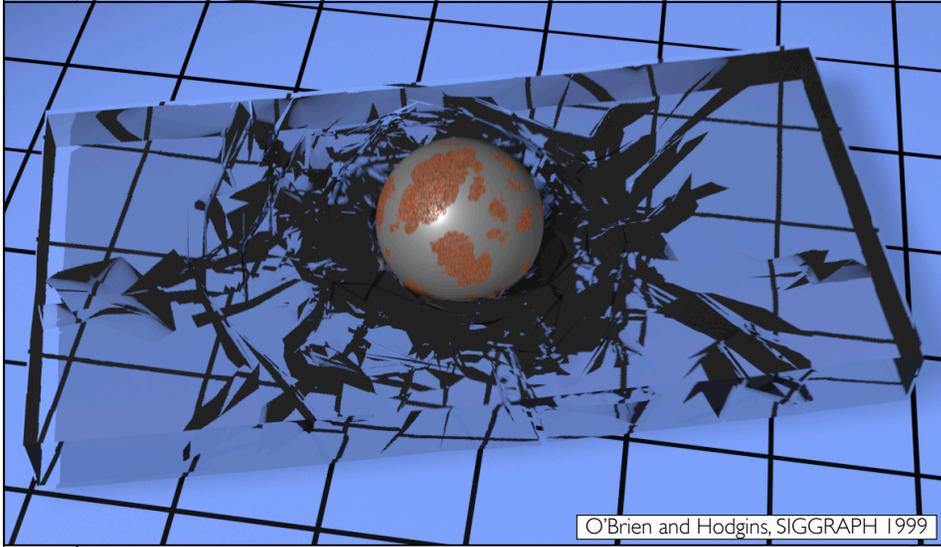

- Schlick approximation to Fresnel Equations

$$k_t(\theta_i) = k_0 + (1 - k_0)(1 - \cos \theta_i)^5$$

$$k_0 = \left( \frac{n_t - 1}{n_t + 1} \right)^2$$

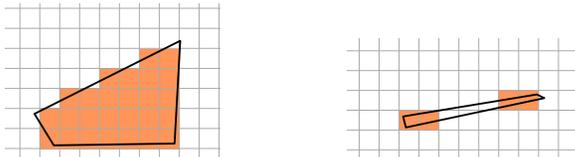

- Attenuation
  - Wavelength (color) dependant
  - Exponential with distance

# Refracted Rays

# Anti-Aliasing

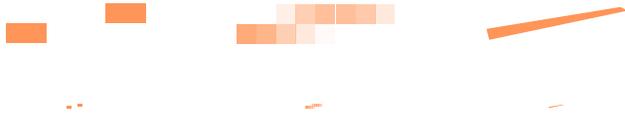

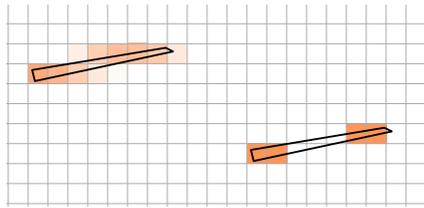

- Boolean on/off for pixels causes problems
  - Consider scan conversion algorithm:

- Compute  $z$  through each pixel center
- Recall Nyquist Theorem
  - *Sampling rate  $\geq$  twice highest frequency*

# Anti-Aliasing

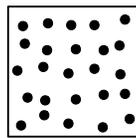

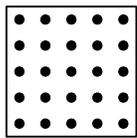

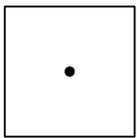

- Desired solution of an integral over pixel

29

# “Distributed” Raytracing

- Send multiple rays through each pixel

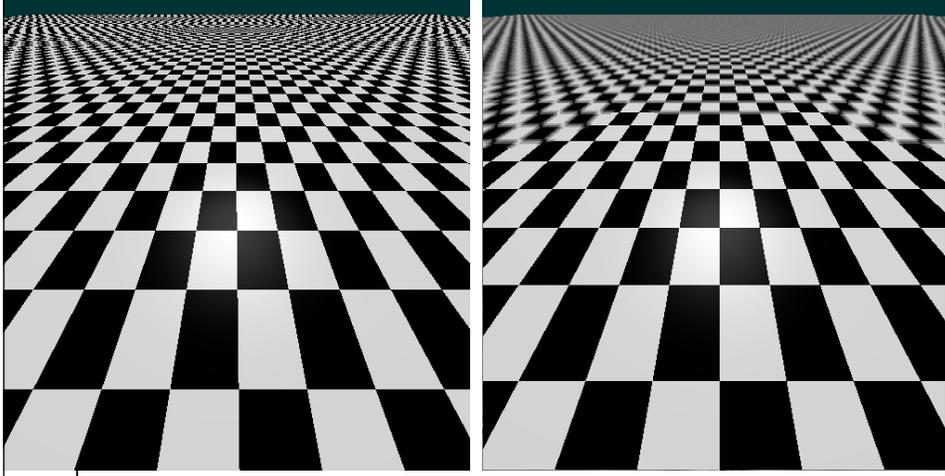

One Sample    5x5 Grid    5x5 Jittered Grid

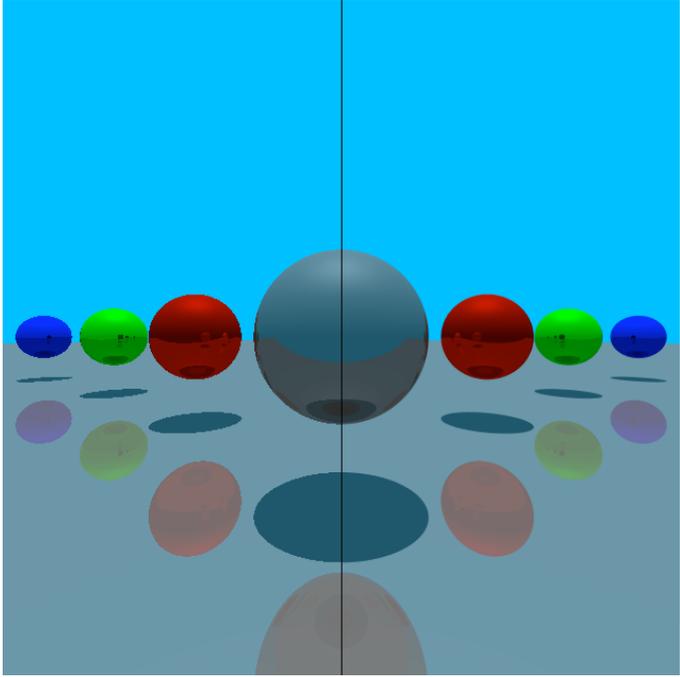

- Average results together
- Jittering trades aliasing for noise

30

# “Distributed” Raytracing

31

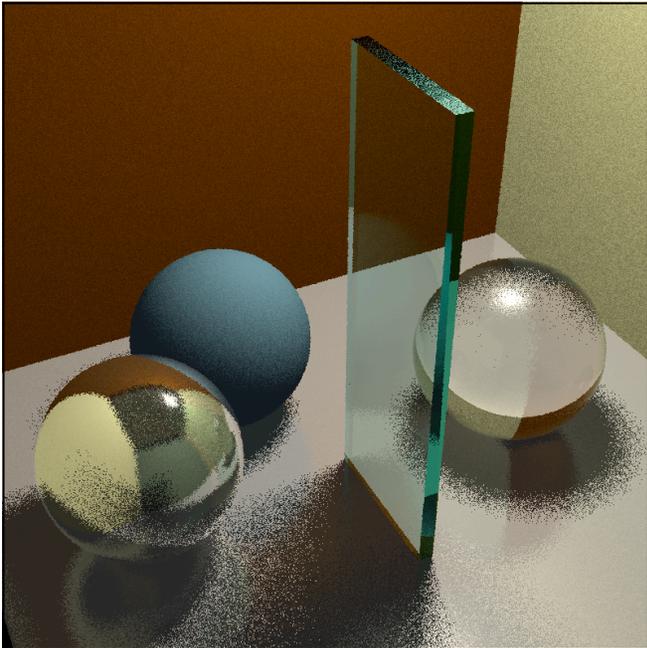

Beverly Chiu and Max Delgado  
CS 184 2007

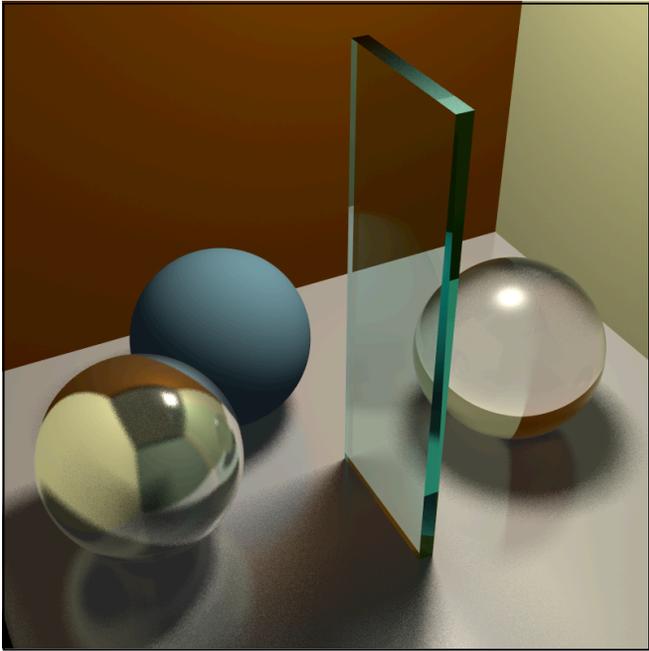

# “Distributed” Raytracing

- Use multiple rays for reflection and refraction
  - At each bounce send out many extra rays
  - Quasi-random directions
  - Use BRDF (or Phong approximation) for weights
- How many rays?

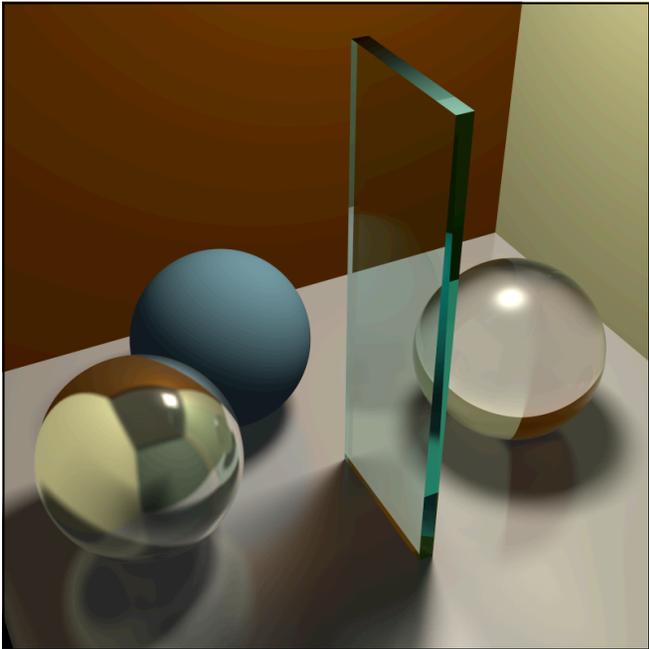

33

# Soft Shadows

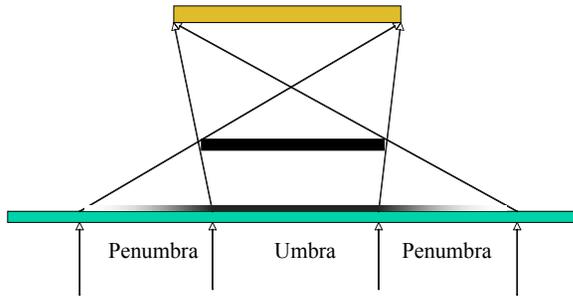

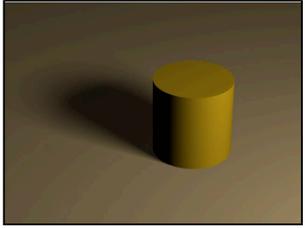

Figure from S. Cheney

# Soft Shadows

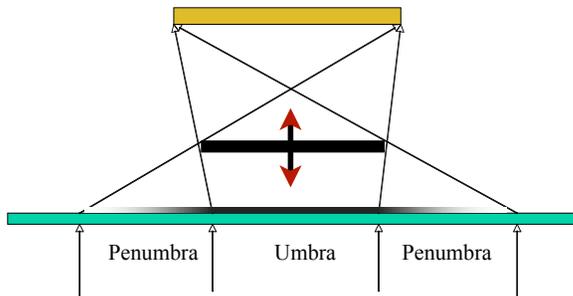

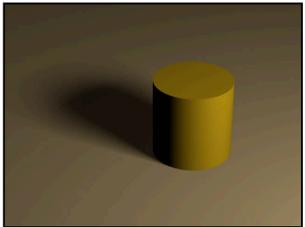

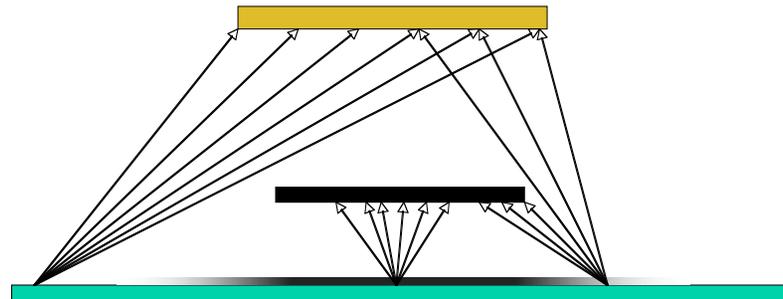

Figure from S. Cheney

# Soft Shadows

- Distribute shadow rays over light surface

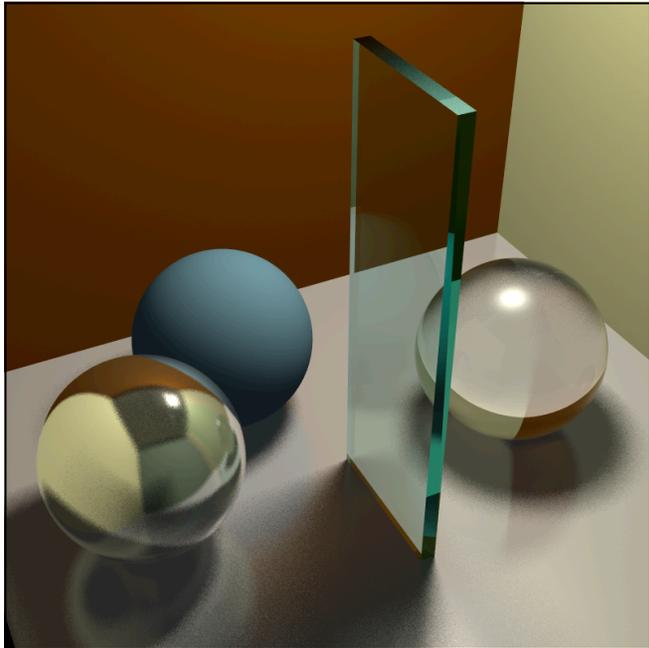

All shadow rays  
go through

No shadow rays  
go through

Some shadow  
rays go through

Figure from S. Cheney <sup>38</sup>

# Motion Blur

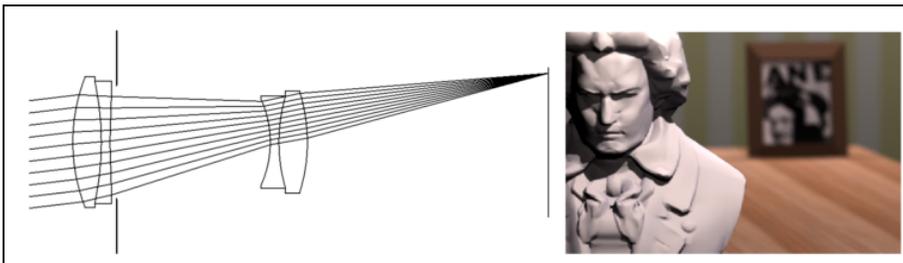

- Distribute rays over *time*
  - More when we talk about animation...

**Pool Balls**  
Tom Porter  
RenderMan

40

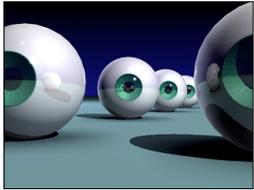

# Depth of Field

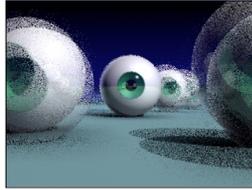

Kolb, Mitchell, and Hanrahan  
SIGGRAPH 1995

41

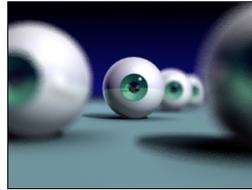

# Depth of Field

No DoF

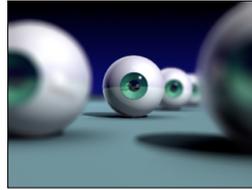

Jittered rays for DoF

More rays

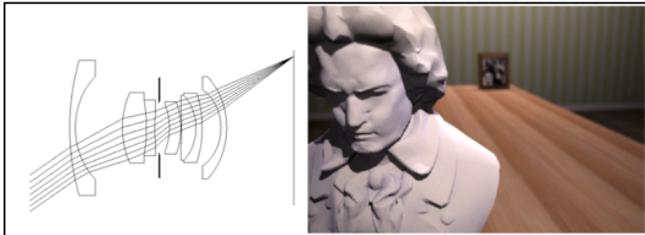

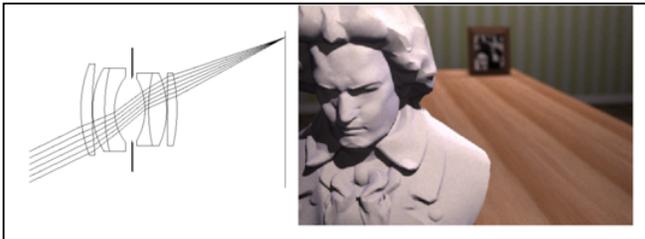

Multiple images for DoF

Even more rays

42

# Other Lens Effects

# Ray -vs- Sphere Test

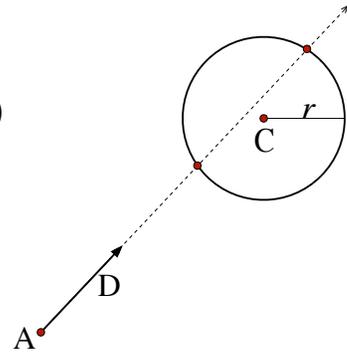

- Ray equation:  $\mathbf{R}(t) = \mathbf{A} + t\mathbf{D}$
- Implicit equation for sphere:  $|\mathbf{X} - \mathbf{C}|^2 - r^2 = 0$

• Combine:

$$|\mathbf{R}(t) - \mathbf{C}|^2 - r^2 = 0$$

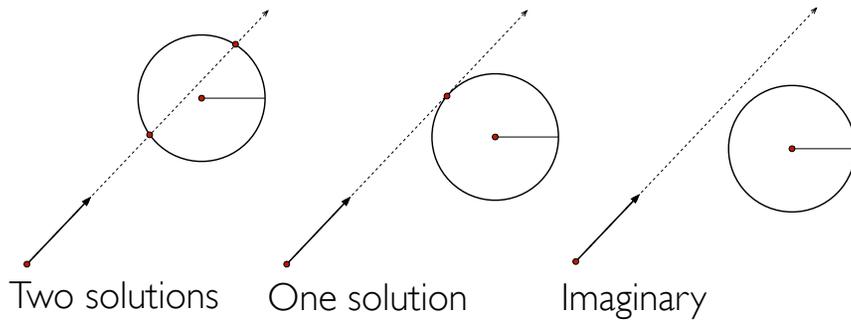

$$|\mathbf{A} + t\mathbf{D} - \mathbf{C}|^2 - r^2 = 0$$

- Quadratic equation in  $t$

44

# Ray -vs- Sphere Test

45

# Ray -vs- Triangle

• Ray equation:  $\mathbf{R}(t) = \mathbf{A} + t\mathbf{D}$

• Triangle in barycentric coordinates:

$$\mathbf{X}(\beta, \gamma) = \mathbf{V}_1 + \beta(\mathbf{V}_2 - \mathbf{V}_1) + \gamma(\mathbf{V}_3 - \mathbf{V}_1)$$

• Combine:

$$\mathbf{V}_1 + \beta(\mathbf{V}_2 - \mathbf{V}_1) + \gamma(\mathbf{V}_3 - \mathbf{V}_1) = \mathbf{A} + t\mathbf{D}$$

• Solve for  $\beta$ ,  $\gamma$ , and  $t$

- 3 equations 3 unknowns
- Beware divide by near-zero
- Check ranges
